Review Policy and procedures

Each manuscript submitted to **Body Composition and Health Research Journal** is evaluated by **at least two independent reviewers** who have expertise in the relevant field. The journal applies a **strict double-blind peer-review system**, in which the identities of both authors and reviewers are kept confidential to ensure fair and unbiased assessment.

Body Composition and Health Research Journal strictly discourages any attempt by authors to contact reviewers directly and likewise prohibits reviewers from contacting authors. All communication must go through the journal to preserve the integrity of the review process.

Authors must also submit a **written response** addressing each reviewer comment when submitting their revised manuscript. In cases of disagreement between authors and reviewers, the **Editor-in-Chief** has the final authority on acceptance or rejection.

For reviewers/editors

Reviewers/editors should not upload or input confidential information from unpublished manuscripts to AI tools: All manuscripts assigned to reviewers/editors should be treated as confidential. If a manuscript is uploaded to an AI tool, confidentiality may be breached as the manuscript has been retained on a third-party cloud server. Reviewers/editors should also not upload any part of the manuscript such as a selected paragraph, table or figure to an AI tool.

Reviewers/editors should disclose any use of AI tools to assist the reviewing work: If an AI tool was used to assist with the reviewing activities (e.g., to improve comment writing, summarise key points or look for references), it must be disclosed to the editor/Chief Editor.

Reviewers/editors are fully responsible for the evaluation of a manuscript: Reviewers/editors are responsible for all comments, suggestions, and recommendations in the review, even if an AI tool was used in their generation.

Reviewers/editors should flag their concerns to the editors/Chief Editor if inappropriate AI use by authors is suspected: **Body Composition and Health Research Journal** now requires authors to disclose any AI use for manuscript preparation in the Acknowledgement section. If inappropriate AI use by the authors is suspected, it should be escalated to the editorial board for further investigation.
